

# Sohil Palasara

Java Back End Developer

+91 8799644632 ◇ sohilpalasara10@gmail.com ◇ Palanpur, Gujarat, India ◇ [LinkedIn](#)

## SUMMARY

**Java Backend Developer** with 12+ months of experience building **scalable, secure, and high-performance backend systems** using **Java, Spring Boot, and Microservices Architecture**. Skilled in designing and developing **RESTful APIs, transactional systems, and distributed services**.

Hands-on experience with **database design and optimization (MySQL/PostgreSQL), caching mechanisms (Redis), and message-driven architectures**. Strong knowledge of **Spring Security, JWT Authentication, and role-based access control (RBAC)**.

Proven ability to develop **financial systems** ensuring **ACID compliance, data consistency, and high availability**. Adept at **performance tuning, query optimization, and system reliability improvements**.

Familiar with **Git, Maven, Docker (basic), CI/CD pipelines**, and agile development methodologies (**Agile/Scrum**).

Passionate about writing **clean, maintainable code** and building **enterprise-grade applications**.

## EXPERIENCE

### Java Developer

Aug '25 — Present

Quba infotech

Chhapi, India

- Architected and deployed scalable backend services using Java and Spring Boot, resulting in a 25% increase in system throughput through strategic schema design and query optimization.
- Engineered high-performance RESTful APIs and integrated third-party systems, reducing API latency by 30% through the implementation of Redis caching and indexed database queries.
- Enhanced system security and reliability by implementing Spring Security with JWT and Role-Based Access Control (RBAC), ensuring 100% data integrity for sensitive user operations.
- Led peer code reviews and enforced clean code standards while collaborating in an Agile environment to accelerate sprint delivery by 15% across cross-functional teams.

## PROJECTS

### AVX - Car Buy & Sell Platform, AVX

Present

- Developed a microservices-based architecture using Spring Boot and gRPC to facilitate low-latency communication, reducing inter-service response times by 30%.
- Optimized data persistence layers using JPA/Hibernate and normalized SQL schemas, improving data retrieval speeds by 20% for high-traffic search queries.
- Automated monitoring and debugging processes by implementing centralized logging, global exception handling, and structured API responses.
- Ensured 90%+ code coverage by developing comprehensive unit and integration tests using JUnit, Mockito, and SonarQube for static code analysis.

### Accounting pro(ERP System)

Aug '25 — Nov '25

- Developed a high-concurrency accounting engine supporting double-entry bookkeeping, ensuring ACID compliance for over 10,000+ monthly financial transactions.
- Automated taxation workflows for GST/VAT calculations, increasing reporting accuracy by 35% and reducing manual reconciliation efforts for end-users.
- Optimized complex SQL queries for real-time generation of Profit & Loss statements and Balance Sheets, maintaining high performance under heavy data loads.
- Integrated RabbitMQ for asynchronous processing of ledger updates, enhancing system responsiveness and decoupling core financial modules.

## SKILLS

**Language** Java (OOP, Streams), C

**Backend Frameworks** Spring Boot, Spring Security, Spring Data JPA, Hibernate

**Architecture & APIs** Microservices, REST APIs, API Design, API Versioning, API Documentation(Swagger)

**Databases** PostgreSQL, MySQL

**Tools & Platforms** Git, GitHub, Postman, IntelliJ IDEA, Insomnia

**Methodologies** Agile, Scrum

## EDUCATION

Bca , Gokul Global University

Jul '23 — Present
